# WARNING AND OPERATING INSTRUCTIONS FOR LIFTING CAPACITIES ATF65G-4

## GENERAL

1. Total rated loads shown on the TADANO LOAD RATING CHART apply only to the machine as originally manufactured and normally equipped by TADANO. Modifications to the machine or use of optional equipment other than that specified can result in a reduction of capacity.
2. Hydraulic cranes can be hazardous if improperly operated or maintained. Operation and maintenance of this machine must be in compliance with the information in the **Operation and Maintenance Manual** supplied with the machine. If this manual is missing, order a replacement through the distributor.
3. The operator and other personnel associated with this machine shall fully acquaint themselves with the latest applicable American National Standards Institute (ANSI) safety standards for cranes.

## SET UP

1. Total rated loads shown on the TADANO LOAD RATING CHART are the maximum allowable crane capacities. They are based on the machine standing level on firm supporting surface under ideal job conditions. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger floats to spread the load to a larger bearing surface.
2. For on outrigger operation, outriggers shall be extended to the dimension according to the TADANO LOAD RATING CHART and secured by pins with tires free of supporting surface, before operating crane.

## OPERATION

1. Total rated loads with outriggers fully extended do not exceed 85% of the tipping loads. Total rated loads with outriggers half extended are determined by this formula:  
total rated load = (tipping load - 0,1 tip reaction) / 1.25.
2. The crane's structural steelwork is in accordance with DIN 15018, part 3. Design and construction of the crane comply with DIN 15018, part 2 and with F.E.M. regulations.
3. Total rated loads include the weight of the main hook block, auxiliary hook ball, sling and other auxiliary lifting devices and all their weight shall be subtracted from the listed capacities to obtain the net load to be lifted.

Hookball / Hookblock (ton)	6.6	13.8	35.3			55.1			88.2						
No. of parts of line	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Max. lifting capacity (ton)	4.8	9.7	13.8	19.4	24.5	29.4	34.3	39.2	44.1	49	53.9	58.8	63.7	68.6	75
Weight (lbs)	330	375	660			1,050			1,433						

4. Total rated loads are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, operating speeds, side loads, etc. Side pull on the boom or jib is extremely dangerous.
5. Total rated loads do not account for wind on lifted load or boom. Total rated loads and boom length shall be appropriately reduced, when wind velocity is above 22 m/h (32 ft/sec.).
6. Total rated loads at load radius shall not be exceeded. Do not tip the crane to determine allowable loads. Do not operate at boom lengths beyond radius or boom angles.
7. where no capacities are shown. Crane may overturn without any load on the hook.
8. Slewing of the superstructure is admissible only when the crane is supported on half or fully extended outriggers
9. The lifting capacity ratings specified in the TADANO LOAD RATING CHART apply to the telescopic boom without fly jib fixed in transport position or working position. If the fly jib is secured to the telescopic boom in transport position or working position, the lifting capacities of the telescopic boom are reduced by the values specified below. The weight of the fly jib (2,500 lbs) is detected in terms of a load, and the load moment limiter will shut off earlier.  
29.5 ft / 52.5 ft. fly jib, mounted in transport position : 900 lbs  
29.5 ft. fly jib, mounted to the boom head : 2,200 lbs  
52.5 ft. fly jib, mounted to the boom head : 3,310 lbs

10. When making lifts at a load radius not shown, use the next longer radius to determine allowable capacity.
11. Load per part line should not exceed 10,000 lbs. for the main winch and for the auxiliary winch.
12. Loaded boom angles are approximate. The boom angle before loading should be greater to account for deflection.
13. Extension or retraction of the telescopic boom with loads may be attempted within the limits of the TADANO LOAD RATING CHART. The ability to telescope loads is limited by hydraulic pressure, boom angle, boom length, crane maintenance, etc.
14. When erecting or stowing the extendible fly jib, be sure to retain it by hand or by other means to prevent its free movement. Use the Anti-Two Block (OVERWIND CUTOUT) disable switch
15. When erecting or stowing the extendible fly jib and stowing the hook block. While the switch is pushed, the hoist will not stop, even when an overwind condition occurs.
16. The working radius specified in the TADANO LOAD RATING CHARTS for the extendible fly jib apply only if the telescopic boom is extended according to the TADANO LOAD RATING CHARTS. If one or more elements of the telescopic boom are retracted partially or completely, the specified boom angles will be decisive in determining total rated lifting capacities.
17. When lifting a load by using the extendible fly jib (auxiliary hoist) and telescopic boom (main hoist) simultaneously, do the following:
  - A. Select the correct program for the load moment device in accordance with jib length, jib offset angle, counterweight and outrigger base.
  - B. Before starting the operation, make sure that the weight of the load is within the total rated load for the extendible fly jib.
18. Working with Single Top

Operation with the single top is allowed with the main winch and the auxiliary winch (2nd winch). The maximum allowed capacity is limited by the selected S.L.I. code for main boom operation according to existing counterweight and outrigger base at one side and by the single line pull which is limited by hydraulic pressure at the other side.

For operations with the single top mounted, use the TADANO LOAD RATING CHART for the telescopic boom in accordance with existing counterweight and outrigger base to find the total rated lifting capacity and also select the correct S.L.I. code for the telescopic boom in accordance with the existing counterweight and outrigger base. Find the total rated lifting capacity based on boom length and working radius. From that value, subtract 1,100 lbs and the weights of all lifting equipment used including hook block, sling and other auxiliary lifting devices. The result (<total rated lifting capacity> - <1,100 lbs> - <lifting equipment>) is the total rated lifting capacity for a single top lift.

## **Definitions**

1. Load Radius:  
Horizontal distance from a projection of the axis of rotation to supporting surface before loading to the center of the vertical hoist line or tackle with load applied. The deflection of the boom due to its deadweight and the rated load are taken into account.
2. Loaded Boom Angle:  
The angle between the boom base section and the horizontal, after lifting the total rated load at the working radius.
3. Working Area:  
Area measured in a circular arc about the centerline of rotation.
4. Freely Suspended Load:  
Load hanging free with no direct external force applied except by the hoist line.
5. Side Load:  
Horizontal side force applied to the lifted load either on the ground or in the air.

## **WARNING AND OPERATING INSTRUCTIONS FOR ON TIRE CAPACITIES**

1. Total rated lifting capacities on tires are in pounds and do not exceed 75% of tipping loads as determined by test in accordance with SAE J-765.
2. Total rated lifting capacities shown in the TADANO LOAD RATING CHART are based on the condition that the crane is set on firm level supporting surfaces with suspension let down to block. Those above the bold lines are based on tire capacity and those below the bold lines on crane stability. They are based on actual load radius increased by tire deformation and boom deflection.

3. Total rated lifting capacities are based on proper tire inflation, capacity and condition. Damaged tires are hazardous to safe operation of the crane.

4. Tires shall be inflated to correct air pressure

### Tire Air Pressure

14.00 R 25 - 145 psi (10 kgf/cm<sup>2</sup>)

16.00 R 25 - 130 psi (9 kgf/cm<sup>2</sup>)

20.5 R 25 - 100 psi (7 kgf/cm<sup>2</sup>)

5. On tire lifting with "fly jib" is not permitted.

6. When making a lift on tires, set the parking brake.

7. Traveling with the load is permitted only if the following conditions exist:

Machine is set on firm level supporting surface; tires inflated to specified pressure; boom must be centered over the rear of the machine; superstructure swing lock pin engaged; slewing brake engaged; maximum boom length not to exceed 61.4 ft; lifted load kept as close to the ground as possible and fastened to the chassis to prevent the lifted load from swinging or oscillating; travel slowly with a creeping speed not to exceed 1 mph; and especially avoid any abrupt steering, accelerating or braking.

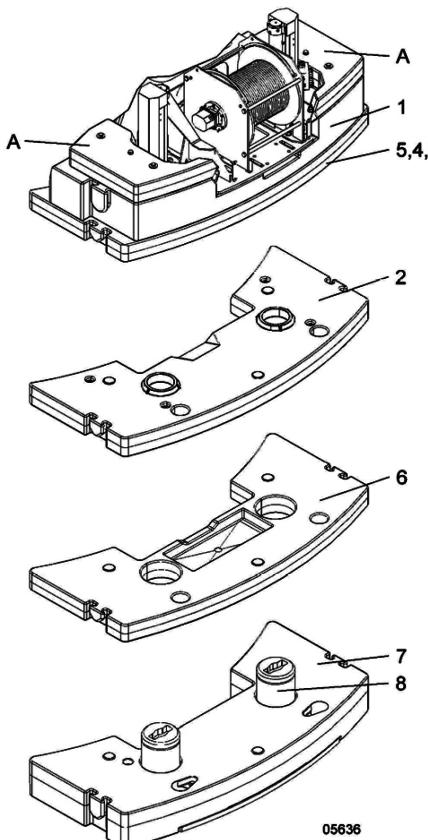

If possible, extend the outriggers and lower the outrigger floats to just above ground level.

8. Do no operate the crane while carrying the load.

## **Safe Load Indicator**

The Safe Load Indicator is intended as an aid to the operator. Under no condition should it be relied upon to replace use of Load Rating Charts and Operating Instructions. Sole reliance upon the Safe Load Indicator Aids in place of good operating practice can cause an accident. The operator must exercise caution to assure safety.
