This manual is provided to assist you with ordering parts for your IMT truck-mounted articulating crane. It also contains additional instructions regarding your particular installation.

Three means are used throughout this manual to gain the attention of personnel. They are NOTES, CAUTIONS and WARNINGS and are defined as follows:

## NOTE

A NOTE is used to either convey additional information or to provide further emphasis for a previous point.

## CAUTION

A CAUTION is used when there is the strong possibility of damage to the equipment or premature equipment failure.

## WARNING

A WARNING is used when there is the potential for personal injury or death.

It is the user's responsibility to maintain and operate this unit in a manner that will result in the safest working conditions possible.

In addition, it is also the user's responsibility to be aware of existing Federal, State and Local codes and regulations governing the safe use and maintenance of this unit. Listed below is a publication that the user should thoroughly read and understand.

ANSI/ASME B30.5-1982

## ROTATION

Turntable bearing powered with a high-torque hydraulic motor through a ring-and-pinion type spur gear train (total gear reduction is 51.8 to 1).

## CYLINDER HOLDING VALVES

The holding sides of all cylinders are equipped with integral-mounted holding and/or counter-balance valves to prevent sudden cylinder collapse in case of hose or other hydraulic failure. The outrigger cylinders have positive, pilot-operated holding valves that open only upon command.

The inner, outer and extension cylinders have pilot-operated counter-balance valves. The counter-balance valve serves several functions. First, it is a holding valve. Secondly, it is so constructed that it will control the lowering function and allow that motion to be feathered while under load. Finally, if a hose breaks, the only oil loss will be that in the hose.

## POWER SOURCE

Integral-mounted hydraulic pump and PTO application. Other standard power sources may be utilized - minimum power required is 17 horsepower.

## HYDRAULIC SYSTEM

Open-centered, full-pressure system that requires 9 GPM (34.1 liters/minute) optimum oil flow at 2750 PSI (193.4 kg/sq. cm.). Six-spool, stack-type control valve with dual operational control handles located at both sides for convenient operation. System includes hydraulic oil reservoir, suction-line filter, return-line filter, pump and control valve.

## MINIMUM CHASSIS SPECIFICATIONS

Body Style . . . . .	Conventional Cab
Wheelbase . . . . .	189"
Cab to Axle . . . . .	120"
Frame Section Modulus . . . . .	19.2 in. <sup>3</sup>
R B M . . . . .	900,000 in.-lbs.
Front Axle Rating . . . . .	9,000 lbs.
Rear Axle Rating . . . . .	17,500 lbs.

In addition to these specifications, heavy-duty electrical and cooling systems and dual rear wheels are required. It is recommended that the vehicle be equipped with an electric engine tachometer, auxiliary brake lock, power steering.

### NOTE

To maintain 100% stability for the above chassis, the finished unit should weigh approximately:

Front Axle	7,100 lbs. (3,221 kg.)
Rear Axle	10,200 lbs. (4,627 kg.)

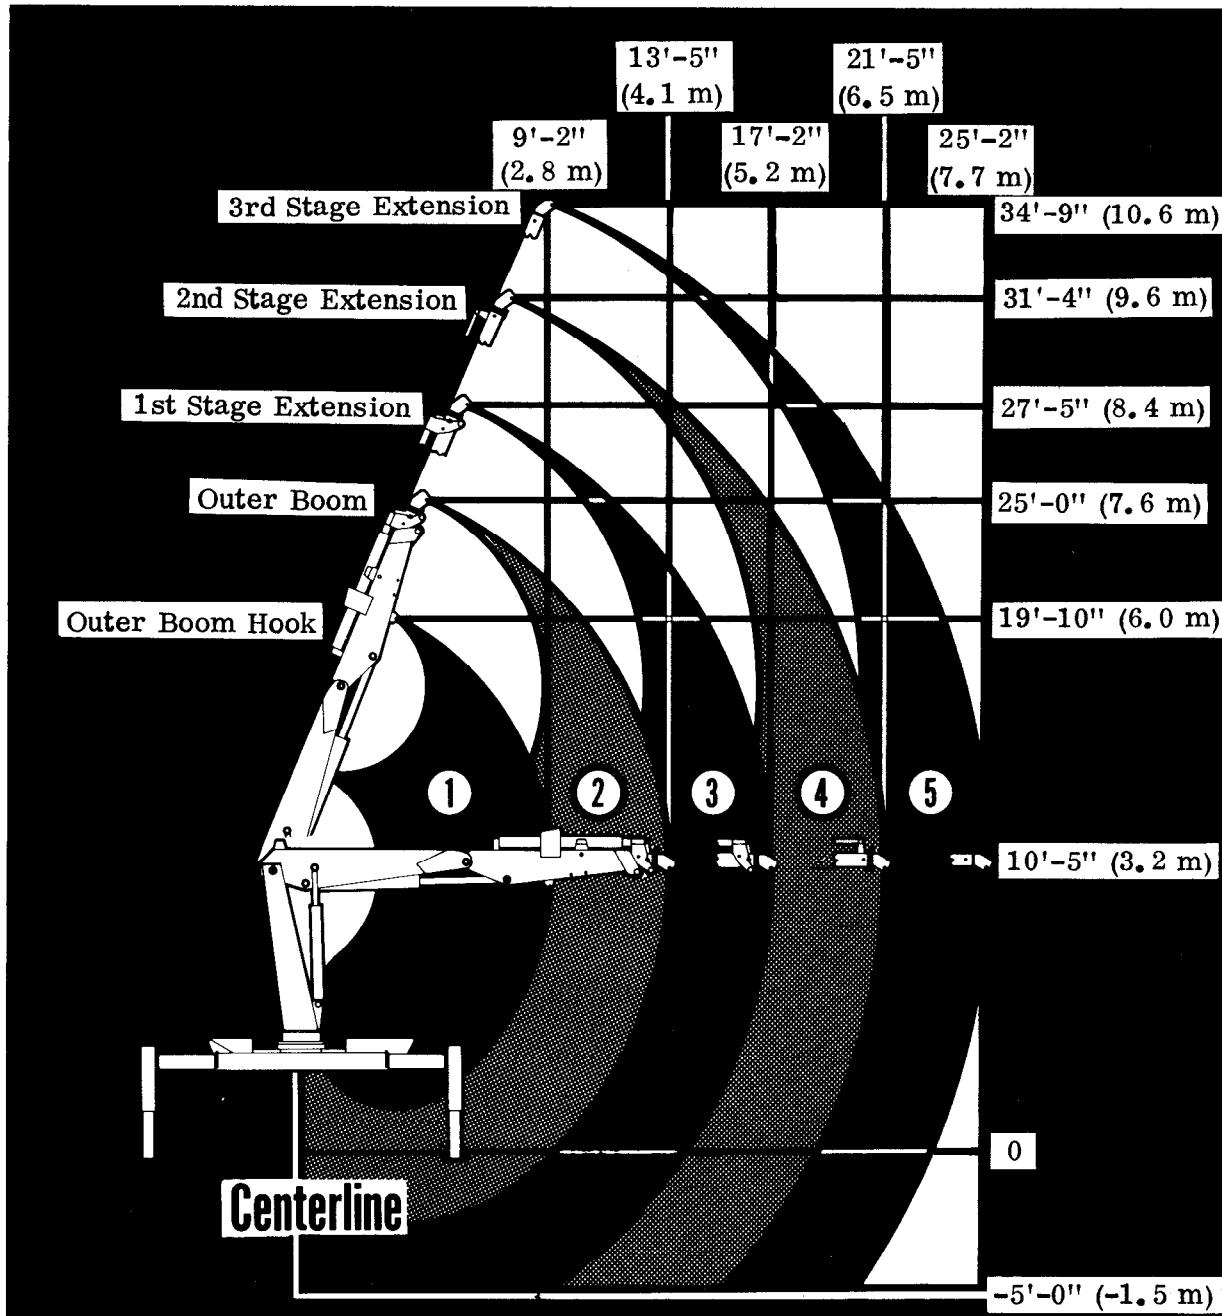

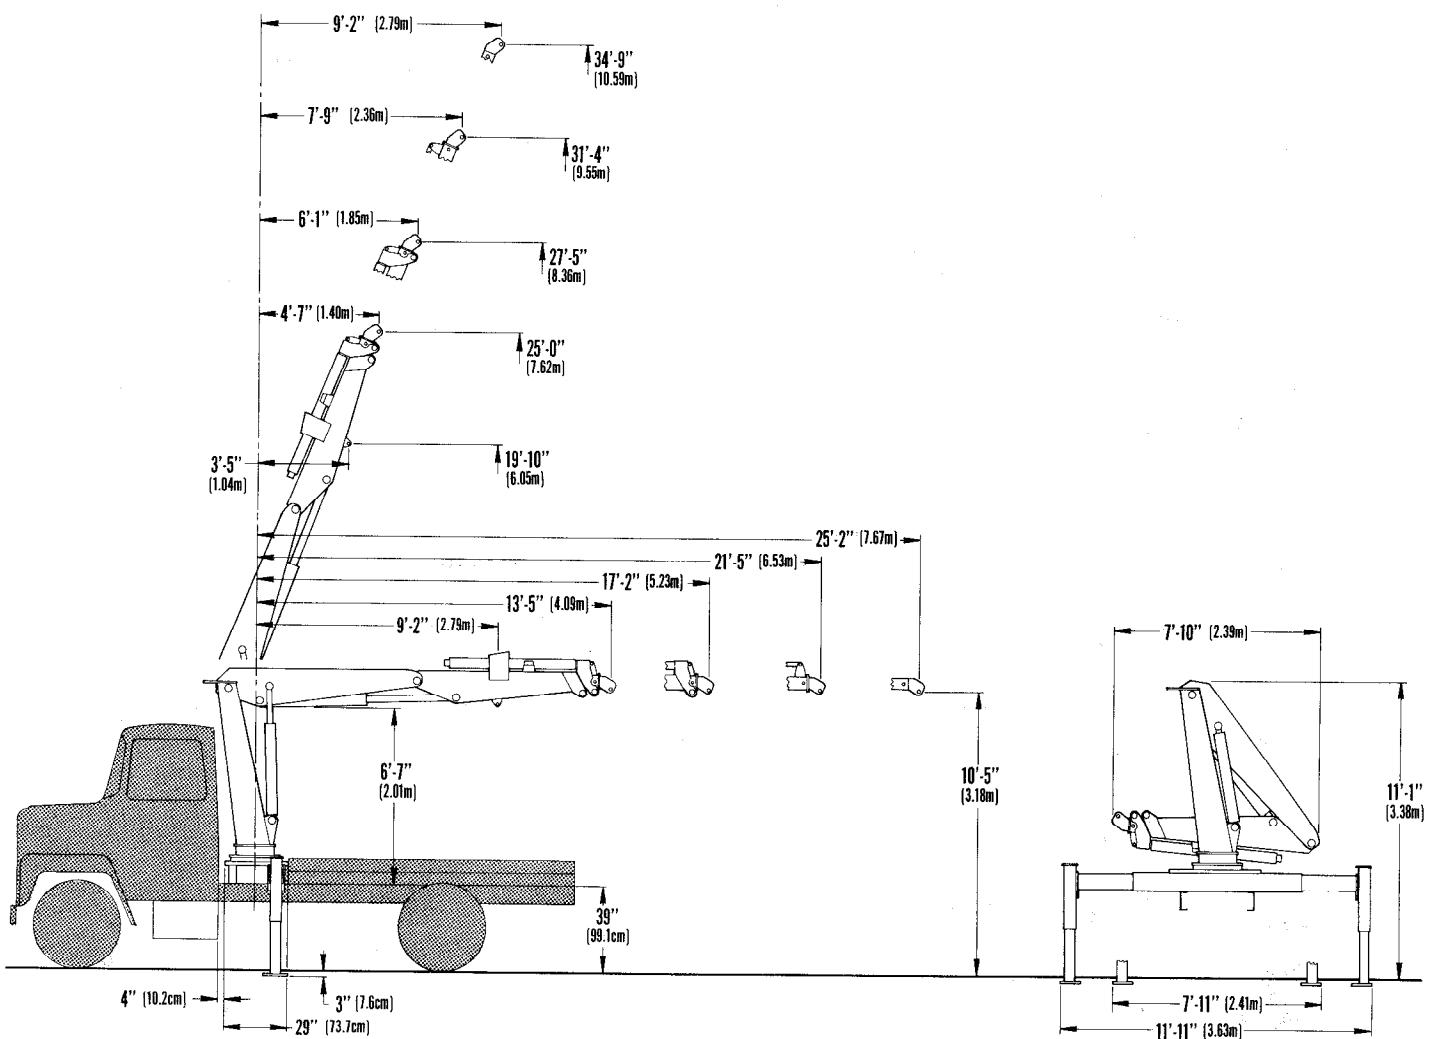

Figure A—1. Capacity Chart

**Figure A—2. Geometric Configuration**

## **Section 2. CRANE DESCRIPTION**

### **2—1. GENERAL**

This section describes the major assemblies that are available with this crane. Figure B-1 illustrates the location of the assemblies.

### **2—2. BASE AND OUTRIGGERS**

The base provides the means for mounting the crane on a truck chassis. It incorporates the  $370^\circ$  (6.46 Rad.) rotation mechanism. The outriggers are housed in the base and may be either manual pull out or power out. Crane stability is provided by the power-down outrigger cylinders.

### **2—3. MAST**

The mast provides the necessary elevation for crane operation as well as a hinge point for the inner boom.

### **2—4. INNER BOOM**

The inner boom will swing through a full  $120^\circ$  (2.09 rad.) from  $-53^\circ$  (-0.92 rad.) to  $+67^\circ$  (1.17 rad.). It is raised and lowered through the use of twin, double-acting hydraulic cylinders.

### **2—5. OUTER BOOM**

The outer boom will swing through a full  $137^\circ$  (2.39 rad.). It provides the mounting point for the optional winch and an additional location for attachment of the crane hook. It is raised and lowered through the use of a single, double-acting hydraulic cylinder.

### **2—6. EXTENSION BOOM**

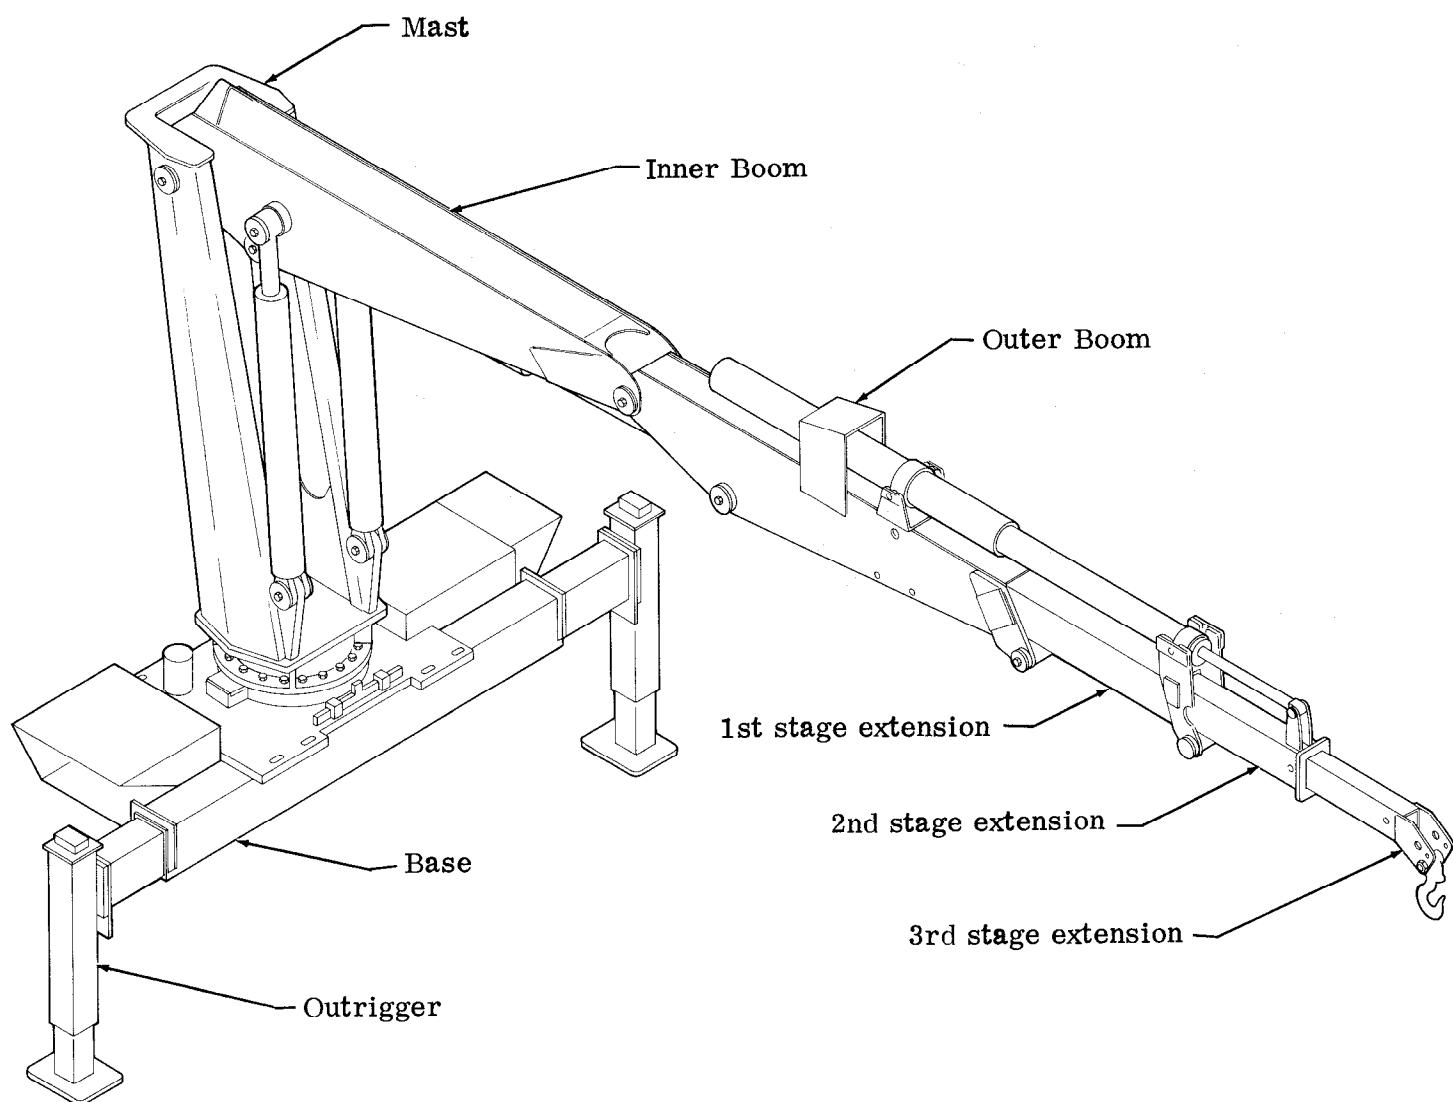

The extension boom will increase the operating range of the crane from  $13' - 5"$  (4.1 m) to  $25' - 2"$  (7.7 m). This is accomplished by a telescoping, 2-stage, double-acting hydraulic cylinder and a single manual extension.

### **2—7. CONTROLS**

The crane may be operated from either side of the base or from an optional remote control unit with 35 ft. (10.7 m) of control cable.

### **2—8. HYDRAULIC KITS**

The crane hydraulics consist of double-braided pressure hoses, return hoses, filters, control valve bank and all necessary hydraulic fittings.

# Section 3. INSTALLATION

## 3-1. GENERAL

This section contains specific instructions for the installation of your crane. Prior to installing the crane and hydraulic components, make sure the chassis is ready to receive the crane (refer to Section 5, Installation - Chassis Preparation in Volume 1).

## 3-2. CRANE INSTALLATION

To install the crane on the chassis:

1. Use a lifting device capable of lifting the weight of the crane - approximately 4,500 lbs. (2,041 kg.) depending upon the optional equipment added to the standard crane. Attach the lifting device to the lift bracket welded to the top of the inner boom. Lift the crane, move the chassis into position under the crane and lower the crane into

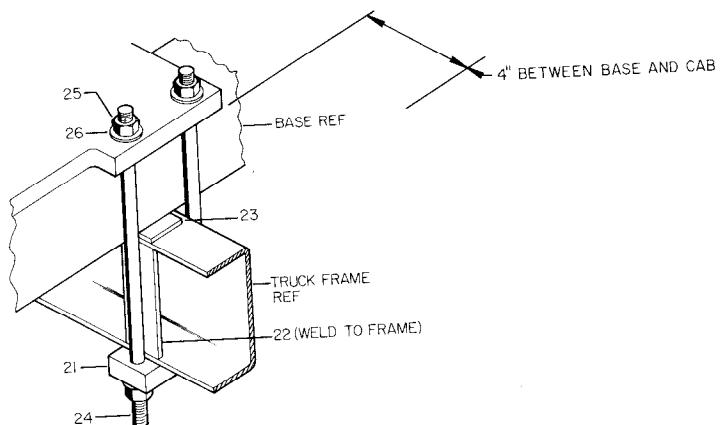

the desired position. Allow sufficient room between the crane and cab for mast rotation - at least 4" (10.2 cm). Check for front to rear alignment.

2. Install the tie rods, clamp plates, washers and lock nuts to secure the crane base to the chassis (Figure C-1). Power wrench the nuts tight.

### CAUTION

Do not attempt to apply the same torque to the tie rod and self-locking nuts as shown in the Torque Data Chart in the APPENDIX in Volume 1. Do not exceed 200 ft. lbs. (28 kg-m). Exceeding this torque value could damage either the chassis or crane base.

Power wrenching is not recommended until the lead thread of the nut insert is engaged by hand turning.

Figure C-1. Crane Installation

### 3—3. HYDRAULIC INSTALLATION

To install the hydraulic hoses, fittings, etc.:

1. Plumb the suction line filter as shown in Figure C-2.
2. Install the 1-1/4" suction hose between the suction-line filter and the pump inlet. Tighten the hose clamps.
3. Install the pressure hose between the valve bank and the pump outlet.
4. Fill the hydraulic oil reservoir to the "FULL" mark.

5. Open the gate valve at the suction filter.

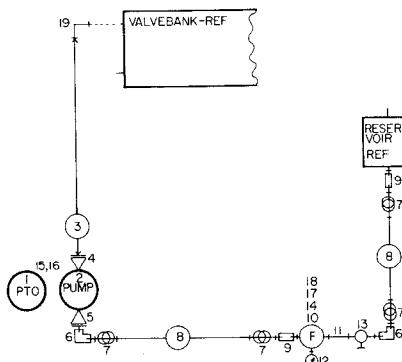

#### CAUTION

Failure to open the gate valve will result in a dry running pump which may damage the pump.

6. Open the return gate valve.

7. Start the vehicle engine and engage the PTO. Allow the system to run for about 5 minutes and then check the vacuum gauge on the suction-line filter (it should read 8" or less of mercury). If the vacuum reading is too high, check to make certain that the gate valve is open. If the gate valve is open, check for a collapsed or restricted suction line.

## Section 4. PARTS LIST

### 4-1. GENERAL

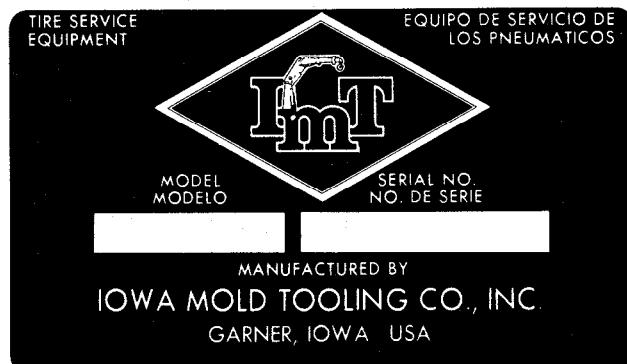

This section contains the exploded parts drawings with the accompanying parts list for the assemblies used on this crane. These drawings are intended to be used in conjunction with the instructions found in the REPAIR section in Volume 1. For optional equipment such as winches and remote controls, refer to the appropriate service manual.

#### WARNING

Do not attempt to repair any component without reading the information contained in the REPAIR section in Volume 1. Pay particular attention to the WARNING's, CAUTION's and NOTE's contained in that section. Failure to comply with these instructions may result in damage to the equipment, an injury or even death.

### 4-2. CRANE IDENTIFICATION

Every crane has an identification placard (Figure D-1) attached to the mast. When ordering parts, communicating warranty information or referring to the unit in correspondence, always include the assigned serial and model numbers. All inquiries should be addressed to Iowa Mold Tooling Company, Inc.; 500 Highway 18 West; Garner, Iowa 50438, telephone: (515) 923-3711 or TWX 910-523-6930. In Canada: Red Top Equipment, Ltd.; Orillia, Ontario; telephone: (705) 325-7458.

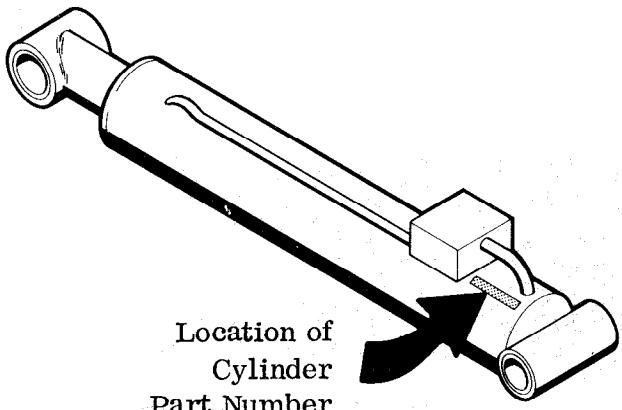

**Figure D-1. Serial Number Placard**

### 4-3. CYLINDER IDENTIFICATION

The crane has a cylinder identification placard (Figure D-2) attached to the mast. To ensure proper replacement parts are received, it is necessary to specify a complete number/letter sequence for any part request. Part numbers may be cross checked by comparing the stamped identification of the cylinder case (Figure D-3) against the information stamped on the placard. You must use the part number stamped on the cylinder case when ordering parts.

**Figure D-2. Cylinder Identification Placard**

**Figure D-3. Cylinder Part Number Location**

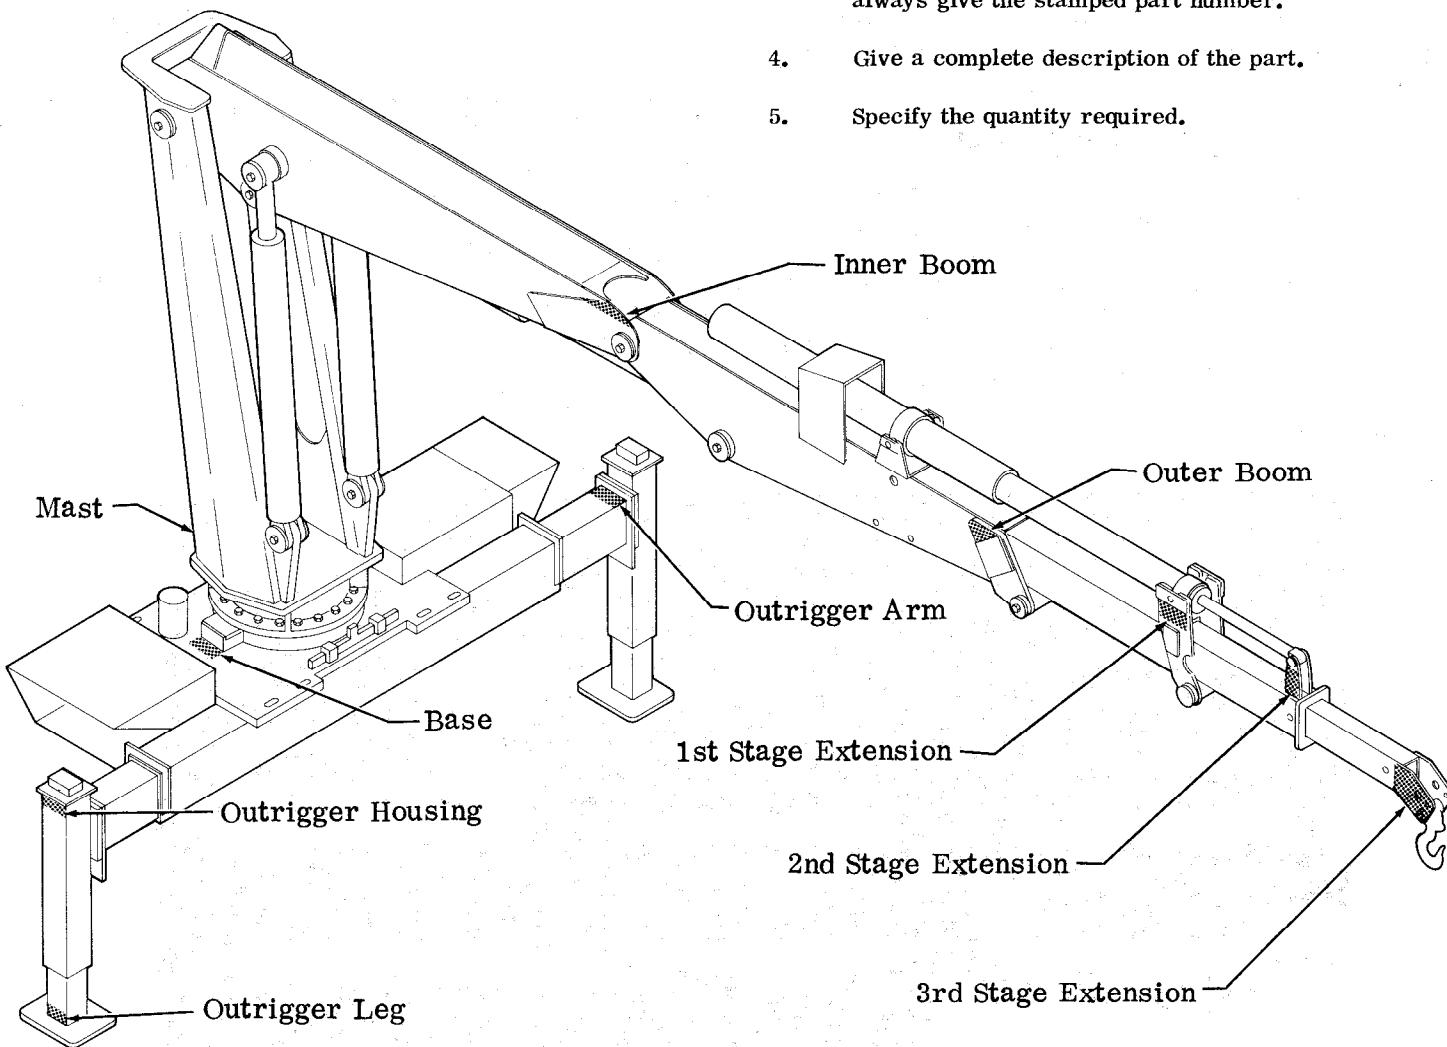

#### **4-4. WELDMENT IDENTIFICATION**

Each of the major weldments - base, mast, inner boom, outer boom, extension boom and outrigger weldments - bear a stamped part number. Any time a major weldment is replaced, you must specify the complete part number as stamped on the weldment. The locations of the part numbers are shown in Figure D-4.

#### **4-5. ORDERING REPAIR PARTS**

When ordering replacement parts:

1. Give the model number of the unit.
2. Give the serial number of the unit.
3. Specify the complete part number. When ordering cylinder parts or one of the main weldments, always give the stamped part number.
4. Give a complete description of the part.
5. Specify the quantity required.
