\*See "OUTRIGGERS SET" note, page 6.

746580

\*\*"Offset" — Angular offset centerline of boom to centerline of jib.

Maximum Allowable Loads shown in shaded area are limited by factors other than tipping.

CAUTION: DO NOT OPERATE MACHINE WITH JIB ON BOOM POINT UNLESS THE MACHINE IS LEVELED AND STANDING ON A FIRM, UNIFORM SUPPORTING SURFACE WITH THE "OUTRIGGERS SET".

CAUTION: LONG CANTILEVER BOOMS CAN CREATE A TIPPING CONDITION WHEN IN EXTENDED AND LOWERED POSITION. DO NOT OPERATE AT BOOM ANGLES LOWER THAN SHOWN ON CHART

#### JIB SERVICE

Maximum Allowable Loads shown apply only to machine with all components in first class condition built or recommended by Bucyrus-Erie Company.

Maximum Allowable Loads are based on freely suspended loads with the machine leveled and standing on a firm, uniform supporting surface. Practical working loads depend on supporting ground, the effect of shock or side loading, wind, and other factors affecting stability, hazardous surroundings, experience of personnel and proper handling, all of which must be taken into account by the operator.

Maximum Allowable Loads are based on components and conditions shown under "LIMITATIONS" and "MACHINE EQUIPMENT".

Maximum Allowable Loads are in accordance with P.C.S.A. Standard  $^{\#2}$ 

#### LOAD RATING DEDUCT DATA

Weight of hooks, hook blocks, slings, and all other load handling devices, except the hoist rope, shall be considered part of the load.

When hook block is suspended on boom point sheave, the load over the jib point sheave must be reduced as follows:

24 ft Jib

44 IL JID	IIOO 1Ds.	
39 ft. Jib	1000 lbs.	
54 ft. Jib	950 lbs.	
When hook block is	suspended on swing-around point sheave,	the
load over the jib poi	oint sheave must be reduced as follows:	
01 ft T:h	1550 lbs.	
24 II. JID	1330 lbs.	
39 ft. Jib		

#### LIMITATIONS

Required length of boom for lattice jib service is 144 feet. The boom must be fully extended, with swing-around section locked into working position on the boom point sheave pins.

Refer to "Crane Load Rating Chart" for other items that apply.

#### MACHINE EQUIPMENT

Alloy steel tubular jib, 11,000 lb. counterweight, and pertinent equipment listed on "Boom Load Rating Chart".

# 90-XC HYDROCRANE® 90 TON HYDRAULIC TRUCK CRANE

#### UPPER WORKS

Revolving Frame:

All welded, reinforced alloy steel plate construction with all primary structural members boxed, for maximum rigidity.

Diesel engine with 12 volt electric starting system and alternator. Fuel tank capacity 50 gallons.

Hydraulic Pumps:

Two multi stage, gear type, tandem mounted, direct driven. Total flow, 212 GPM at 2500 RPM pump speed. Master clutch standard.

Hydraulic Valves:

Pressure compensating for winch and swing functions and low effort for boom functions.

Hydraulic Reservoir:

Open type, with integral baffles and return line diffuser. System capacity 260 gallons.

Filter System:

Return line type with replaceable 10 micron elements and filter condition indicator.

Swing:

Hydraulic vane type motor driving a precision double reduction planetary swing unit with integral disc brake. Brake is spring set with hydraulic release. Hydraulic disc type glide brake and mechanical type houselock optional. Maximum swing speed is 3 RPM.

Swing Circle

Precision ball bearing swing circle, designed and built by Bucyrus-Erie Company.

Counterweight:

Optional 11,000 lb. removable cast.

42 ft. 6 in. to 104 ft. long, three sections full power with synchronized, dual lever, extension and retraction. 40 ft. horizontal swingaround lattice extension for total boom length of 144 ft. Lattice jibs 24, 39, and 54 ft. optional. Integral holding valves on both telescoping cylinders. Boom extend time is 70 seconds (minimum) and boom retract time is 91 seconds (minimum). Boom length decals are standard.

Boom Elevation:

Twin double acting hydraulic cylinders with integral holding valves. Elevation from minus 3 degrees to 80 degrees. Combination control lever provides for hand or foot operation. Boom elevation times are 71 seconds (minimum) raising and 65 seconds (minimum) lowering. Boom angle indicator is standard.

Operator's Compartment:

Independent of machinery cab with windows on four sides and overhead for full visibility. Constructed of Tri-Armor for strength and

sound insulation. Sliding door window and hinged front window panel. With front and glareproof overhead panels hinged open, the operator has unrestricted visibility. Operator's controls include hand and foot throttle with full length control levers. Bucket seat, windshield wiper, horn, and door and window locks are standard. Heater, defroster, and air conditioner

Main Hoist Drum:

Precision, high speed, planetary hoist units are custom designed and built by Bucyrus-Erie Company. Hydraulic motor driven with power up and down. Integral automatic brake is designed to prevent load creep. Two speed control is standard on main drum, normal and high range. Controlled free fall optional, allows high speed lowering under full control of foot pedal operated mechanical brake.

High speed lagging optional. Lagging fits over reeved drum. Line required for operation is unspooled from top layers of drum. Lagging installed, then respool. Unused line is stored under high speed lagging.

Auxiliary Hoist Drum:

A second hoist drum that mounts ahead of main drum is optional. It is a Bucyrus-Erie Company designed and built unit and includes same features as main drum. Controlled free fall and high speed lagging are available as options.

#### Chassis:

Specially designed and built to Bucyrus-Erie Company specifications. Equipment includes front and rear fenders, top frame decking, towing eyes at front, steps, and grab handles. A 75 gallon fuel tank is mounted on side of the frame. Standard carrier has 266 in. wheelbase and 9 ft. 10 in. overall width.

Outriggers:

Hydraulically powered, double box type welded to frame, front and rear. Two stage telescoping beams extend to 27 ft. 0 in. centerline scoping beams extend to 27 ft. 0 in, centerline to centerline of vertical jacks and retract to 9 ft. 10 in. overall width. High strength alloy steel is used throughout. Vertical cylinders are equipped with double lock valves designed to prevent drift either up or down. Alloy steel floats.

Outrigger controls located on both sides of carrier frame near rear outiggers are standard. Biaxial levels located at outrigger controls.

Front Axles: Schuler DCB Tridem, non-driving type. 93.3 in. track Dynamic capacity of Tridem is 60,000 pounds.

Rear Axles: Eaton DP580-P Tandem. Dynamic capacity of tandem, 58,000 pounds. 85 inch track. 7.39 ratio standard.

Suspension:

Front: Reyco spring mounted. Rear: Tandem walking beams.

Wheels:

Steel spoke type.

#### CARRIER

Tires:

(Six) 16.5 x 22.5 — 16 ply, highway Front: tread standard.

Rear: (Eight) 12 x 20 — 16 ply non-directional

tread standard

Service Brakes: Air brakes on three front and both rear axles.

Front:  $17\frac{1}{4}$  in. x 4 in. Rear:  $16\frac{1}{2}$  in. x 7 in.

Parking Brakes: Maxi spring loaded brake chambers on both rear axles with reserve (emergency release) air tank.

Steering:

Hydraulic power assist type is standard.

Power Plant:

Detroit Diesel 8V-71N diesel engine, 8 cylinder, 568 cu. in. displacement is standard. 12 volt electric starting system. Cummins NTCC 350 is optional.

Clutch:

15½ in. diameter, two plate.

Fuller RT01258LL with 10 speeds forward. Roadranger type with single shift lever.

Forward

1st — 13.15:1 2nd — 9.21:1 2.49:1 6th ----7th ---1.83:1 3rd — 6.15:1 4th — 4.51:1 8th 1.34:1 4.51:1 1.00:1 9th - 3.36:1

Reverse

1st — 13.75:1 2nd — 9.63:1 3rd — 2.86:1

One-man type semi-low profile, Tri-Armor cab offset to left side of carrier. West Coast type mirrors. Bostrom Viking T-bar seat is standard.

Instruments:

Speedometer, voltmeter, tachometer, oil pressure indicator, fuel gauge, water temperature indicator, air pressure gauge, and low air pressure warning device.

Accessories:

Standard equipment includes: sealed beam headlights, tail and stop lights, dome light, front and rear directional signals, clearance lights and reflectors, electric horn, windshield washer and wiper, and heater and defroster. Optional equipment includes: Spare tire and rim, air horn, hourmeter, low oil pressure warning device, back-up alarm, Jacobs engine brake and air conditioning.

Geared Speed:

With standard engine at governed speed (MPH). Maximum 47

Miscellaneous:

GVW Rating (pounds) Turning Radius 112,000 50 ft. 55 ft. Clearance Radius

#### CRANE SERVICE

Maximum Allowable Loads shown apply only to machines with all components in first class condition built or recommended by Bucyrus-Erie Company.

Maximum Allowable Loads are based on freely suspended loads with the machine leveled and standing on a firm, uniform supporting surface. Practical working loads depend on supporting ground, the effect of shock or side loading, wind, and other factors affecting stability, hazardous surroundings, experience of personnel and proper handling, all of which must be taken into account by the operator.

Maximum Allowable Loads are based on components and conditions shown under "LIMITATIONS" and "MACHINE EQUIPMENT".

Maximum Allowable Loads are in accordance with P.C.S.A. Standard #2.

Load Radius is the horizontal distance from the axis of rotation before loading, to the center of the vertical hoist line or tackle with load applied.

#### LOAD RATING DEDUCT DATA

Weight of hooks, hook blocks, slings, jibs, and all other load handling devices, except the hoist rope, shall be considered part of the load.

Maximum Allowable Loads on main boom sheaves must be reduced 2,650 lbs. when lifting over the main boom with manual swing-around extension attached to boom point; Jibs — Maximum Allowable Loads must be reduced as follows:

Jib	When Lifting Over Main Boom With Swing-Around and Jib Attached	When Lifting Over Swing-Around With Jib Attached
24 Foot	4,500 lbs.	3,250 lbs.
39 Foot	4,950 lbs.	3,550 lbs.
54 Foot	5,400 lbs.	3,900 lbs.

		52,500	60,000	 75,000	

#### Swing-Around Hoist Tackle

For loads over 15,000 pounds use 2 parts of line.

#### Jib Load Rating

For Maximum Allowable Loads on jibs, refer to separate Jib Load Rating Chart.

#### **Boom Telescope**

Maximum Allowable Load which may be telescoped is limited by boom angle, hydraulic pressure, and boom lubrication. Boom sections must be extended equally at all times.

#### Machine Weight

Maximum Allowable Load ratings are based on a machine having a minimum front axle loading of 43,000 lbs. and a minimum rear axle of 61,500 lbs. with the boom in the boom rack, and counterweight attached to upper works.

#### MACHINE EQUIPMENT

11,000 lbs. removable counterweight.

#### Carrie

266 in. W.B. — 9 ft. 10 in. wide 10 x 4 semi-low profile cab carrier with hydraulic outriggers to 27 ft. 0 in. spread.

#### Wire Rope

Main and Auxiliary Hoist (Model #20)  $34^{\prime\prime}$  dia., 6 x 25, IPS, IWRC, 51,200 lbs. minimum breaking strength.

Auxiliary Hoist (Model #10)  $58\,^{\prime\prime}$  dia., 8 x 19, EIPS, IWRC, 36,200 lbs. minimum breaking strength.

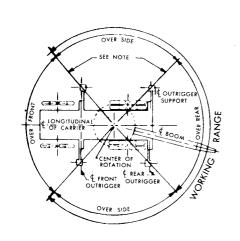

For complete wire rope specifications and reeving, refer to instruction manual for this machine.

QUADRANT DIAGRAM MACHINE — "OUTRIGGERS SET"

NOTE: THESE LINES DETERMINE THE LIMITING POSITION OF ANY LOAD FOR OPERATION WITHIN WORKING AREAS INDICATED.

#### \*"OUTRIGGERS SET"

See quadrant diagram "OUTRIGGERS SET". These are the Maximum Allowable Loads which can be lifted, Over the Side or Over the Rear. This machine must always be operated with the outriggers fully extended and set to a distance of 27 feet 0 inches between centerlines of the float connections with all tires clear of the ground.

 $\ensuremath{\mathsf{DO}}$  NOT lift or swing loads within the quadrant designated Over Front.

Maximum Allowable Loads shown in shaded area are limited by factors other than tipping.

Crane Loads do not exceed 85% of the tipping loads with the machine leveled and standing on a firm, uniform supporting surface.

CAUTION: DO NOT LIFT LOADS, EXTEND BOOM, OR SWING MACHINE WITHOUT OUTRIGGERS FULLY SET.  $^\star$ 

CAUTION: LONG CANTILEVER BOOMS CAN CREATE A TIPPING CONDITION WHEN IN EXTENDED AND LOWERED POSITION. WHERE NO LOAD IS SHOWN ON THE LOAD RATING CHART AT A GIVEN RADIUS, TIPPING CONDITION SHALL BE ASSUMED TO EXIST.

CAUTION: USE OF JIB IS LIMITED TO MACHINES WITH COUNTER-WEIGHT PROPERLY ATTACHED TO REAR OF CRANE.

#### \*"OUTRIGGERS SET"

See quadrant diagram "OUTRIGGERS SET". These are the Maximum Allowable Loads which can be lifted, Over the Side or Over the Rear. This machine must always be operated with the outriggers fully extended and set to a distance of 27 feet 0 inches between centerlines of the float connections with all tires clear of the ground.

DO NOT lift or swing loads within the quadrant designated Over Front.

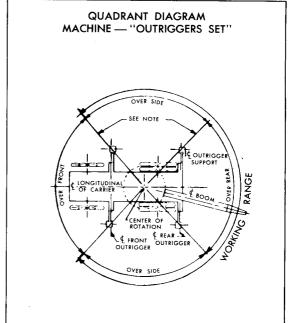

Maximum Allowable Loads shown in shaded area are limited by factors other than tipping.

Crane Loads do not exceed 85% of the tipping loads with the machine leveled and standing on a firm, uniform supporting surface.

CAUTION: DO NOT LIFT LOADS, EXTEND BOOM, OR SWING MACHINE WITHOUT OUTRIGGERS FULLY SET.\*

CAUTION: LONG CANTILEVER BOOMS CAN CREATE A TIPPING CONDITION WHEN IN EXTENDED AND LOWERED POSITION. WHERE NO LOAD IS SHOWN ON THE LOAD RATING CHART AT A GIVEN RADIUS, TIPPING CONDITION SHALL BE ASSUMED TO EXIST.

**WARNING:** The information contained in this specification is to be used only as a guide in evaluating the performance of a machine. For operation of a machine always refer to the capacity plate on the machine (since this specification may apply to a different model or series).

**NOTE:** THESE LINES DETERMINE THE LIMITING POSITION OF ANY LOAD FOR OPERATION WITHIN WORKING AREAS INDICATED.

# 90-XC HYDROCRANE® 90 TON HYDRAULIC TRUCK CRANE

#### **AXLE LOADS IN POUNDS**

	266 INCH WHEELBASE CARRIER				TOTAL
	1	Basic Machine (Including diesel engines in upper and carrier, full fuel, outriggers, 104-ft. boom plus 40-ft. swing-away section and main hoist.) Note: Does not include operator or counterweight.	46,600	46,900	93,500
