Transport dimensions and weights

Engine

Water cooled, V 8 cylinder Liebherr diesel engine, turbo charged with intercooler, model D 9408 TI-E, power rating according to ISO 9249, 400 hp at 1900 rpm.
 Fuel Tank: 2x 122 gal capacity with continuous level indicator and reserve warning.

Hydraulic system

An axial displacement pump supplies the open loop hydraulic system for boom luffing, jib luffing and travel.
 The main hoist winches and swing are operated in a closed loop system. All functions can be operated simultaneously. To minimize peak pressure an automatic working pressure cut-off is integrated in a pump. All filters are electronically monitored. The use of synthetic environmentally friendly oils (biodegradable) is possible.
 Max. working pressure: 5000 psi
 Hydraulic oil tank capacity 248 gal

Winches

Winch options:
 Line pull (1st layer) _____ max. 47.400 lbs
 Line pull (7th layer) _____ 33.100 lbs
 Rope diameter: _____ 28 mm
 Drum diameter: _____ 29 inch
 Rope speed ft/min on average _____ 0 - 453
 Rope capacity 7 layers _____ 1870 ft
 The winches are outstanding in their compact design and easy assembly.
 Propulsion is via a planetary gearbox in oil bath. Load support by the hydraulic system; additional safety factor provided by a spring loaded, multi-disc holding brake. The main winches use pressure controlled, variable flow hydraulic motors. This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.
 Option - winch with freefall system:
 Clutch and braking functions on the freefall system are provided by a compact designed, low wear and maintenance free multi-disc brake.

Equipment

- Main boom (No. 2220.xx) max. length _____ 296 ft
- High reach (No. 2220.xx / No. 2018.xx) _____ 324 ft
- Luffing jib (No. 1916.xx) max. length _____ 272 ft
- Max. combination _____ boom 181 ft and luffing jib 272 ft (boom 190 ft and luffing jib 233 ft)
- Fixed jib (No. 1008.xx) _____ 36 ft - 85 ft
- Auxiliary jib 33 US t lifting capacity
- Hook

Jib luffing winch

Max. line pull: 23.150 lbs. Rope diameter: 20 mm.
 51 sec. to boom from 15° to 78°

Boom luffing winch

Max. line pull: 33.100 lbs. Rope diameter: 24 mm.
 137 sec. to boom from 15° to 86°

Swing drive

Consists of rollerbearing with external teeth, swing drive with fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion.
 Free swing with hydraulic moment control reduces wear to a minimum. A multi-disc holding brake acts automatically at zero swing motion.
 Swing speed from 0 - 1.8 rpm continuously variable.

Crawler

Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, crawler tracks, hydraulic chain tensioning device.
 Flat track shoes 35 inch
 Drive speed 0 - 0.84 mph

Control

The control system - developed and manufactured by Liebherr - is designed to withstand extreme environmental conditions such as temperature, vibration and electromagnetic interference and to meet all requirements that are needed in heavy duty crane operation.
 Complete machine operating data are shown on a high resolution display.
 Standard operational information is displayed by means of graphical symbols, fault indications are displayed in plain text (more than 10 languages available).
 The cranes are equipped with proportional control for all main movements, which can be carried out simultaneously.
 A backup control system, that allows limited use of the crane is standard. This feature increases the safety and availability of the crane even further.
 The crane is operated with 2 multi-directional joysticks, the right for winch I and boom hoisting, the left for winch II and slewing control.
 Option:
 Parallel handle bar joysticks for simultaneous winch and luffing jib operation.
 The crawlers are activated with the two central foot pedals. Additionally, hand levers can be attached to the pedals.

Remarks

1. The lifting capacities stated are valid for lifting operation only (corresponds with crane classification according to F.E.M. 1.001, crane group A1)
2. Crane standing on firm, horizontal ground.
3. The weight of the lifting device (hoisting ropes, hook block, shackle etc.) must be deducted from the gross lifting capacity to obtain a net lifting value.
4. Additional equipment on boom (e.g. boom walkways, auxiliary jib) must be deducted to get the net lifting capacity.
5. For max. wind speed please refer to lift chart in operator's cab or manual.
6. The slewing speed of the load must not exceed 90 m/min.
7. Working radii are measured from centre of swing and under load.
8. The lifting capacities are valid for 360 degrees of swing.
9. Calculation of stability under load is based on DIN 15019 / part 2 / chart 1 and ISO 4305 Tab1 + 2, tipping angle 4°.
10. The structures are calculated according to F.E.M. 1.001 - 1998 (prEN 13001 / T2 / 1997).

Noise emission

110 dB (A) at 50 ft - 71 dB (A) inside the cab.
